

Four spindel programmable drilling machine .

- Automatic Machine is designed to drill 4 different diameter holes to the objects. Holes positions could be programmed for each spindel for X and Y axels.
- Machine has 4 swiss made SUHNER spindels. Each drilling position could be programmed separately. Drilling spindels hight could be adjusted mechanically for drill lenght compensation.
- Machine perform drills lubrication automatically after preprogrammed workcycles performance.
- Machine is equipped with tuchpad for adjustments and programming. Machine has easy and intuitive programming software with different acess levels and statistics for production and service needs.
- Machine software has 50 memory slots allowing to save products parameters. Each product may have up to 100 holes.
- Machine could be equipped with chip removing system on request.
- Machine could be combined with robotic loading system.
- Changing the product type may require to change drilling jigs and drills.
- Machine customization could be done on customer request.
- Machine has CE confirmation.

Technical specification:

- Overall dimentions with powering unit (mm) W x H x D: 2100 x 1200x 1100
- Work space: 300mm x 300mm
- Drill diameter: up to 6mm
- Rotation speed : varying between 46 and 9320 RPM and can be obtained by choosing different V-belt and pulley combinations
- Power supply 400 VAC, 10 A
- Compressed air 6 bar
